7: Marroquin E-5 (1955) 1957 NU31 Seri NU31

In general, the Seris have a healthy appearance; the most frequent complaints are gastro-intestinal and visual defects due to avitaminosis. It is very possible that given the difficult living conditions resulting from the desert environment, a rigorous selective process among the newborn takes place so that only those who possess exceptional physical qualities survive. This explains why the majority of them retain the physical characteristics described by Hardy more than a century ago: "the Indians of Isla Tiburón are tall, healthy and well built".

In spite of attempts at education, the Seris do not practice the elemental rules of hygiene; their way of life, neglecting this aspect, contributes to increase the unhealthy foci which exist in the places where they have established themselves.

Dwellings.—The Seris retain many vestiges of their nomadic life, among them the hut which serves as their living quarters; many of them are simple provisional arrangements for sheltering themselves from wind and sun, and they bear no relationship to the stability and durability of our dwellings. The Seri hut was made to meet the necessities of a nomadic people who had no reason to spend much time nor work on making a dwelling which would only be used for a season (one, two or at the most three months). Nevertheless, some innovations have been introduced in the last 20 years, so that we must distinguish between two types of houses. The primitive model consists of a series of scrub pine arches interwoven with branches from the same shrub almost totally covered by foliage, tortoise shells, *zacate*, etc., with only a small hole in one of its ends as an entrance (this type of hut is the same that McGee saw in 1894 when the Seris still led a nomadic life).

In the new model more resistent woods are used, like *sahueso*, *torote*, etc., and poles, between which is laid a layer mud. The house is rectangular, without windows; with only one entrance, but always larger than the entrance to the brush hut. Other models would have to be added to these two, due to the incorporation and utilization of tents made in the United States which some U. S. tourists or the Society of Friends have given them. The tent is used as permanent living quarters; or sometimes combined with branches to cover the primitive type huts.

Domestic Animals.—The Seris are very fond of domestic animals like the dog, cat, and finally, the chicken. For all practical purposes these animals live together with the family; they rest on the piles of rags and sand which serve the Indians as beds; lick the plates and cooking utensils; dirty the house; increase the household fauna with their fleas and other vermin thus contributing to create and unhealthy atmosphere in the home.

Problems of Intoxication.—Their dealings with the fish buyers, in whose stores are sold beer, mezcal and tequila, has turned them to the consumption of these drinks. The Seri drinks liquor in an uncontrolled

261 will exist on very small rations, bear burdens, and walk long dis-
262 tances. Their food is anything that walks, flies, crawls or swims,
[252] and they eat it raw with the same relish that we eat it cooked. There is but one thing they will not eat; they draw the line on the Gila monster. They are the most perfect type of human being adapted to desert conditions that exists today. Convey them blindfolded many miles into the heart of the desert, empty-handed, remove their blinders, and they will find both food and water where others would perish. The Papagos and Yaquis do almost as well."

302 We gave the women a small bag of flour and three or four cubes of
[123] sugar around, and the men three packets of tobacco each and two boxes of matches. Matches with them are very precious and are rarely used. Rather than use a match a woman came over to our fire and borrowed some coals to rebuild her fire. From this point the nearest matches are a good deal over one hundred and twenty miles distant, so they have to economize in every thing.

422 Each rag is valuable, and flour, sugar, coffee and rifle shells
[434] are absolutely priceless. While they know money, it has no value here.
[437] Only commodities go here. The most highly prized things are boards to
[389] make boats and rifle shells to get game and protect themselves. All empty shells are saved, the primer punched out, straightened, a match head put in, a little pinch of powder on top, the shell filled up, a long bullet inserted, the shell pinched tight, and a fresh set of ammunition is made.

142 The women and children certainly did look wild. Their hair was
291 frowsy and unkempt, their skirts and waists a patchwork of dirty rags
302 coming just below the knees; their features seamed and hard and cruel. Their complexion was very dark. They had no under garments. The children wore only a dirty shirt coming a little below their thighs, and even that is ragged. One or two of the women had a dirty bandanna over their heads. How I wished I could have seen them in their ancient, picturesque pelican-skin kilts!

302 I happened to witness the operation of a Seri beauty parlor. A
[024] mother brushed the hair of her thirteen-year-old daughter with a brush
[283] made from the fibrous roots of a certain grass tied together with
[515] sinew. During the operation if she came across a *piojo*, and she found several, she plucked him away from his feeding ground and dropped him in the fire.

The hair neatly brushed, the mother then mixed paint in a small vessel and with a tiny stick painted a bright blue design under the eyes and across the cheeks and nose, and then she added narrow white stripes, which, contrasting with the blue and the dark skin, produced a very striking effect. This paint is easily removed and the women often paint and remove three different face designs in one day.

304 I did not see tattoo work on either men or women, nor did they
301 wear ceremonial feathers as did our western Indians.
